Abstract
COVID-19 related mortality in high-risk individuals is substantial and current t limited. There is emerging evidence that the COVID-19 vaccines can reduce th and prevent deaths. Three COVID-19 vaccines are approved in the United King in development. There is limited data on the triggers and mechanisms of anaf vaccines. We review the potential allergenic compounds in the COVID-19 vacc innovative allergy support model for the vaccination hubs that allows most pa allergy be immunised. Finally, we propose a practical algorithm for the investi to these vaccines.
